

Item	Issues	Y/additional info	Next Step:	Priority	Time span	Requestor	Date Requested
1	Add 239.50 Catalogs that have been submitted. Sullivan, Bena	Unable to connect to either catalog.				Charles Brown at Sullivan; Susan Henthorn at Bena	1/17/02 received Bena request.
2	Do systematic searching of all databases to make sure all search options actually work.	This item needs expanding. Many items within this.	01/20/02 - Found a few catalog date linkers which still need test.	High			
3	Not all full-text e-mailing is working.	HTML code showing up in e-mail msg. See Health Source Plus, World Am & ASE, for examples. (SourcePlus DB also doing something else strange per Tani) I see if DatabaseInterface should be set to false.	Beth is looking at this one (2/28/02)	High		Tani	7/13/01
4	Check formats for bookmarks. Sometimes the "New marked records" button results in a page with no useful information on it. We have to be sure that the bookmark formats for all databases contain relevant citation information.	Part of "systematic searching of all db's"		High		Beth	
5	Clean up group subject searching.	Some databases within a group have subjects identified as "top", some are identified as "top". Makes subject searching within a group fail. Not sure if we can just redefine the abbreviation and have that work, or if we need to disable subject searching in groups. Have to investigate this.		High		Beth	
6	Literaries rule in WorldCat pulling literaries from all over the country or just Ohio libraries.	Investigate to see if we can pull only KY libraries info.		High		Tani	5/4/02
7	Add Cambridge catalog. They are going with Embase and will be on Web2.0 in Jan. 2002.	2/25/02 - We've never received formal notification about Cambridge joining Web2.0 yet		High			
8	In multiple db groupings, modify gadget to have databases in one box and search form in 2nd box. Especially important for larger groups like catalogs.	As was doing this		Low			
9	Exit/Logout Page: Can we go to the KYVL home page once we click on "logout"? Right now we go to a login page that users don't normally see even when they are using an OJpassword.			Low			
10	Add Clinical Reference Systems db (EBSCO) part of Health Source Plus	It is 2 compliant, we do have local db name and port number		Low			
11	Once marked or printed is it possible to automatically unmark the records that were marked?	Software?	Bring this to the group	Low			
12	Journal/Issue: what does this mean? what is the format for searching? Is this a keyword search in that field or an exact title search?	Corrected MAS FullText Ultra, it had been incorrectly defaulting to keyword instead of journal/issue search. BOSTI EM	An issue for the group to discuss. How to label that field?	Low			
13	Add examples for fields. For instance date: month/yyyy. Helps patrons know how to enter query.		Discuss with the Web2 group	Low			
14	In ASE (and others?), in advanced search, why is the year in the dropdown menu and separate below? Do we need it in both places?		Discuss with the Web2 group	Low			
15	For individual catalog searches remove "a brief description of each database is available here" message.	Replace with link to generic catalog description. Note - Both questions doing this.		Low		Susan	7/17/01
16	ProQuest PDF's available	PDF's are supposed to be available in the 239.50 access. I can't find information in their technical guide about how to do this, and don't see a likely field in the screen dump. Not sure this is possible. I have looked into this more. I contacted a StatSearch user at U Maryland - the institution Proquest says is doing PDF via StatSearch. Here's his response: "We aren't using Proquest in production. We did test it awhile ago, but couldn't use it because Proquest uses a 239.50 protocol to retrieve large PDF's which is not supported by StatSearch." I think we will not be able to get PDF via StatSearch. Both 0201/02		Low		Beth	? in the fall 2001
17	World American: funky text - database sending back links to other articles in the database. These links show up in Web2 as garbage text. See article "Abortion" as example.	might not be anything we can do about it - Beth's what's coming back from the server.		Low		Beth	2/28/02
18	Review look of Web2; create new groupings (maybe include a full text group); change link colors	Like to have mockups by Jan. or Feb. 2002, try to implement in early or late summer 2002.	2/21/02 - On hold until we get direction with EE replacement and assessment info.	Low		Web2 design group	10/15/01
19	Same as above, but for database groups. Not all databases within a group will support the same features.	We have to limit the group options to the lowest common denominator within the group.		Medium		Beth	
20	Alphabetize the "Search Single" page vertically.			Medium		Susan	7/17/01
21	Remove "Browse" option for databases that don't support this feature.			Medium			
22	ADP (others as well?) - [Advanced Search] - change the preferences to display full record instead of brief (limit to full text.) The "HTML full text" field does not appear. Field does appear when pdf is set to display brief record, then click on title of brief record.	Part of "systematic searching of all db's"		Medium			
23	Can we show holdings status for library catalogs?	Mapping issue? 239.50 issue?		Medium			
24	Open List of Periodicals - Add holdings			Medium			
25	In ASE (and others?), in advanced search, the title (exact) search seems to be doing a keyword search of the title field. (Just "Key used for what" by Bill Manning)	Part of "systematic searching of all db's"		Medium		Susan	
26	PDF FullText link in Primary Search and Middle Search takes user to the article in EBSCO native interface. Article is in HTML, but is not the same page as item full-text link.	No link takes user to a PDF document.		Medium		Tani	7/26/01
27	List catalog searches by a year range.			Medium		Warren Gray, Southeast Community College, Cumberland, KY. (800) 559-2145 x2149	10/26/01
28	Add additional index field for ADP key and subject searches.	We Amazon.com search yields 0 results, "Amazon listing of dot-com ad jungle" the search has a subject of AMAZON.COM which yields 0 results. Searches produce results in EBSCO native.	Check documentation for additional key fields that EBSCO may be using that we do not have defined in Web2.	Medium		Jackie Kisher	10/10/01
29	World Cat is missing the OCLC number field (in the native interface this is called Accession number).			Medium		K-12 Bristol/Susan	9/17/01
